The Gender Wage Gap Data Collection Reflection

Directions: You will be comparing your data points to those given to you in the initial worksheet and to a classmate's data. Refer back to the graphs on the gender wage gap to answer the first thought questions. Then, pair up with a classmate. You will be comparing the data you collected and conclusions you made on the gender wage gap with theirs. While you may have asked different questions, see if there are any trends in your findings. After comparing, answer the thought questions and reflect on what you learned about the gender wage gap citing both your findings and your partner's findings.

Thought Questions:

1. In what ways do your findings support or contradict the original data given? Cite specific examples.

2. How does your data add to the narrative that the original data provides?

3. In what ways are your findings similar to your classmate's? Did any of your bullet points match? Did your reflection have any similarities?

4. In what ways are your findings or conclusions different?

5. Reflection: What have you learned about the gender wage gap? Cite the original data given, your findings, and your partner's findings.
